EXPERIMENT Title ANT ON RAIL ANT OPERATOR ARRAGOR ARR	7) 38 ^R 3CO 2) 3RR 3CO 1
ANT ON RAIL	38223
A December 1 38 Pt. 1	2027
EXPERIMENT Title ANT ON RAIL There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until	130
There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.	it gets
	/our task
Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left .\ is to find and return the integer value representing how many times the ant reaches back to original starting position.	BRI
Note:	52 ² 38 ^{22¹}
Assume 1-based indexing	
 Assume 1-based indexing Assume that the railing extends infinitely on the either sides 	300
Input Format:	BRIL
input1 : An integer value N representing the number of moves made by the ant.	
input2 : An integer array A consisting of the ant's moves towards either side	2 ² , i
